What is an automatic transfer switch?
An automatic transfer switch (ATS) is a device that automatically switches from the main power source to a backup power source in case of a power supply anomaly. When the power supply is interrupted or its quality falls below standards, the ATS automatically connects to the backup power source to maintain electricity supply.
What are the advantages of an automatic transfer switch?
The advantage of an automatic transfer switch lies in its ability to automatically detect power interruptions and respond swiftly. Automatic and manual transfer switches are chosen based on a balance of speed and cost,depending on their specific applications. *Including some distributors,etc.
