How to ensure the safety of the power inverter?

So The insulation of the power inverter performance should be better. Of course, in the power inverter safety assessment of the project, apart from the need to consider the above three, we should also want to consider limiting circuit. Thus it can ensure the safety of operating personnel through limit the output currents.

What are the electrical safety requirements for an inverter?

The inverter shall comply with the appropriate electrical safety requirements of AS/NZS 3100. is drawn to requirements for electrical insulation and creepage and clearance distances. But now there is another standard ...IEC62109.1 and IEC62109.2.

What are the safety precautions when using the inverter?

When using the inverter, please take the following safety precautions: Do not ground any of the terminals of the stringsto avoid health risks from electromagnetic radiation. Maintain a distance of at least 20cmfrom the inverter during operation to prevent injury from the hot heat sink. The heat sink may get hotduring operation.
