Where can outdoor base stations be installed?

Outdoor base stations can be installed almost anywhere, including masts, buildings, tunnels etc., and can withstand even the harshest environments. Eliminating the time-consuming and costly need for a dedicated shelter or air-cooling solution.

What is the difference between indoor and outdoor CPE?

Outdoor CPE devices generally provide broader coverage, which is essential for rural areas and households located further away from a cell tower/base station. In contrast, indoor CPE can only be used if the household is sufficiently close to a cell tower, otherwise the Quality of Service can suffer.

What is Damm indoor base station bs418?

Indoor Base Station BS418 Our high-capacity base station built to handle solutions ranging from one site with local coverage to large-scale solutions across multiple sites. Get support The high-capacity, highly efficient DAMM Indoor Base Station BS418 is the most user-friendly, flexible and cost-effective TETRA infrastructure system available.

Where should indoor CPE be located?

First and foremost, Indoor CPE devices need to be placed near a power outlet, ensuring a stable power source for its operation. For optimal performance, indoor CPE should be strategically located near a window to assure good signal reception and distribution throughout the space.
