In my earlier question I was printing a double using cout that got rounded when I wasn't expecting it. How can I make cout print a double using full precision?

The term double precision is something of a misnomer because the precision is not really double. The word double derives from the fact that a double-precision number uses twice as many bits ...

I've read about the difference between double precision and single precision. However, in most cases, float and double seem to be interchangeable, i.e.

Format %lf in printf was not supported in old (pre-C99) versions of C language, which created superficial "inconsistency" between format specifiers for double in printf and scanf.

Possible Duplicate: long double vs double I am unable to understand the difference between between long double and double in C and C++. Can anyone help?
