What challenges does Haiti face in generating and distributing electricity?

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels.

What are Haiti's potential power generating sites?

The procurement of fuel to reliably supply the turbines is a priority for the Haitian government. Other potential power generating sites include 10MW facilities planned for both Port-de-Paix and Jacmel and a 5MW array intended for Jeremie. Grand'Anse and Nippes Departments in the southern region were also target areas for smaller power facilities.

Where do Haitian power generators come from?

According to Haitian dealers' records, 50 percent of power generators come from the United States. Other suppliers include Japan, France, China, and South Korea. According to the United Nations COMTRADE database on international trade, the United States exports of electrical, electronic equipment to Haiti totaled US\$50.15 Million in 2022.

Does Haiti have electricity?

Haiti's largest electricity grid is the Port-au-Prince metropolitan grid. Some towns, such as Fort-Liberté; in the northeast, have an electricity distribution network, but have been effectively abandoned by the national utility EDH. Users thus have to rely entirely on small, privately owned generators to meet their electricity demand.
