At the core of all of our energy storage solutions is our modular, scalable ThermalBattery(TM) technology, a solid-state, high temperature thermal energy storage.

High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and ...

Thermal energy can be stored in three distinct forms: solid/liquid sensible heat, latent heat and thermo-chemical heat. Among the various TES technologies, sensible TES (STES) is ...

High-temperature thermal storage (HTTS), particularly when integrated with steam-driven power plants, offers a solution to balance temporal mismatches between the energy ...

Systems based on sensible heat storage, latent heat storage and thermo-chemical processes are presented, including the state of maturity and innovative solutions.

Savannah River National Laboratory has developed a novel thermochemical energy storage material from Earth abundant elements that provides long-duration energy storage solutions ...

Extreme-temperature process totes and lids withstand large fluctuations and differentials in temperature. They store and cover hot items during transport from a production line.

In this project, our goal is to demonstrate that castable cements can be used to make flanged pipe sections. This will offer a lower cost alternative to nickel alloys such as Haynes 230, to form a ...
