Where should batteries be placed on a pallet?

Shorter batteries should be placed in the center of the layer and taller batteries should be placed on the outside of the layer. The first layer is crucial for the entire pallet to be well balanced and even. Place an adequate layer of cardboard or honeycomb board between each layer and on the very top of the pallet.

How much does a lead acid battery weigh?

Lead acid batteries must have a layer cardboard separating each level. This includes a layer of cardboard on the bottom and the top of the load. Typical Pallet Weight (for 3 layers): Between 2800 and 3300 lbs - Pallets are not to exceed 3300 lbs. Only lead-acid batteries may be packaged: No mixing in other batteries or recyclables.

How many batteries per pallet?

Maximum layers per pallet: 3 - roughly 24 batteries/layer = 72 batteries for 3 layers. Lead acid batteries must have a layer cardboard separating each level. This includes a layer of cardboard on the bottom and the top of the load. Typical Pallet Weight (for 3 layers): Between 2800 and 3300 lbs - Pallets are not to exceed 3300 lbs.

How many bands should a battery be on a pallet?

A minimum of 3 horizontal bands and 3 vertical bands around the palletized cells is also recommended to prevent the batteries from shifting during transport. Banding should be a minimum of 5/8 inch wide. DOT Regulations require that batteries be properly packaged and loaded to prevent short circuits in transit. Keep batteries upright at all times.
