-----  
How many power stations are there in Latvia?

This article lists all power stations in Latvia. Additional to the three major hydroelectric plants, there are approximately 150-160 operational hydroelectric plants with capacity below 5 MW each. There are 19 operational wind farms in Latvia with capacity above 0.25 MW and 18 wind farms with capacity below 0.25 MW.

How much electricity does Latvia generate?

As previously mentioned, hydropower in Latvia accounts for almost 64% of the electricity generated, and according to data for 2023, Latvia has a total installed hydroelectric capacity of 1.57 GW (Fig. 6). The leading generator is Plavinas Hydro Power Plant, built in 1965, with an installed capacity of 908 MW.

What is the main power source in Latvia?

Hydro is an important power source in Latvia, Kegums Hydroelectric Power Station is the oldest hydro power station in the country, built in 1940. It was agreed in 2018 that Estonia, Latvia and Lithuania would connect to the European Union's electricity system and desynchronize from the Russian BRELL power system by February 2025.

What is the main renewable resource in Latvia?

The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into consideration the fact that Latvia cannot offer big subsidies in order to attract investment.

The leading generator is Plavinas Hydro Power Plant, built in 1965, with an installed capacity of 908 MW [27]. In addition to Plavinas, shown on the map, there are less powerful hydroelectric ...

Riga Hydroelectric Power Plant (Latvian: Rigas hidroelektrostacija, shortened Rigas HES) in Latvia is located just beyond Riga's southern border. It is geographically located in the town of Salaspils. Total installed power generating capacity is 402 MW. There are six generators, two transformers and two 330 kV power lines (to Salaspils and Bisuciems).
