How to choose a solar installation in France?

To maximize the production of your solar installation, it is essential to choose the orientation and inclination of your panels carefully. In France, the ideal orientation is due south, with an inclination of approximately 30 to 35 degrees from the horizontal.

Are solar panels a good investment in France?

As electricity prices continue to soar in France - up 60% in four years - more people are turning towards solar panel kits, which promise to help users save on energy costs and installation prices. The estimated extra cost of electricity in 2024, compared to 2020, is EUR540 per household per year.

Can a solar power system be used in France?

A solar power system can be used to supply all your energy needs, although in France it's usually combined with an electric or gas heating system, as solar power cannot usually be relied upon year-round for heating and hot water.

Can you sell solar panels in France?

In France, it is possible to sell the electricity produced by your solar panels to EDF or another energy supplier. The feed-in price depends on the power of your installation and the conditions of the contract. The average lifespan of solar panels is around 25 years.

The growth of the France Solar Container Power Generation Systems Market is primarily driven by the country's commitment to renewable energy and climate goals.
