Are solar panels allowed in Ireland?

These are currently not permitted in Ireland, meaning that in sites where solar and storage or solar and wind are present together, there is a need for two separate connections. Each grid connection requires the construction of physical infrastructure with the associated costs, planning requirements and time.

Are offshore renewables a good investment in Ireland?

Offshore renewables in Ireland have the potential to also support the energy transition in other areas of the economy. This, in turn, offers substantial economic and social benefits and contributes to a just transition. In 2022, Ireland's total electricity generation was 34 TWh, with 13 TWh from renewable energy sources.

Will Ireland's energy transition lead to a more decarbonised energy system?

Our research shows that most respondents also approve large-scale projects that help Ireland reduce carbon emissions (61 percent) and help achieve reach net zero goals (58 percent). James Delahunt, Corporate Finance Partner, Sustainable Futures at KPMG says, "Ireland's energy transition will lead to a more decarbonised energy system.

Is the Irish solar energy industry a success story?

The Irish solar energy industry has been the great success story of Ireland's energy transition in recent years.

Given the importance of priority dispatch to certain sites, such a statement by the CRU will deter many projects from seeking a hybrid connection. It would be helpful to consider ...

A hybrid connection is where more than one source of energy or storage is connected to the national grid on a single site. These are currently not permitted in Ireland, ...

As the plan unfolds, it promises not only environmental benefits but also economic growth through job creation, technological ...
