---

Recently, the Mexican Ministry of Energy announced a new regulation mandating that all newly built wind and solar PV projects must ...

Mexico's energy sector stands at a critical crossroads. While the country boasts immense potential in solar and wind resources, the path to a sustainable and secure energy ...

Mexico has awarded 3.3GW of renewable energy capacity, of which solar PV will account for 2.6GW of capacity.

Mexico's new regulation mandating battery systems for solar and wind projects positions it as a model for energy storage integration in Latin America, according to a new report.

The southeast technical potential includes 5,561 GW of solar PV, 744 GW of wind, an additional 272 MW from conventional geothermal, and the largest hydro resources in Mexico.

Mexico's strategic investments in solar, wind, and geothermal energy, coupled with advancements in energy storage, position the ...

Without a doubt, solar power and wind power should provide the cheapest options for new power capacity in most of the country, especially considering the fact that Mexico has ...

Onshore wind capacity is forecast to rise from 7.8GW in 2024 to around 16.5GW by 2035, driven by ongoing project development in high-resource regions such as Oaxaca and ...

Recently, the Mexican Ministry of Energy announced a new regulation mandating that all newly built wind and solar PV projects must be equipped with energy storage systems ...

However, the increased proliferation of renewables, estimated to average around 2.5GW of solar and 1.3GW of wind annually between 2023 and 2030, in the country's electricity grid has ...

Mexico's strategic investments in solar, wind, and geothermal energy, coupled with advancements in energy storage, position the country as a key player in the global renewable ...

Aurora Energy forecasts Mexico will add 18GW in solar, wind and battery storage by 2030, driven by falling costs and growing electricity demand.
