-----

A new bill, Energy Storage Tax Incentive and Deployment Act, was introduced in March 2021 for standalone ESS and offers similar tax credit benefits for certain renewable energy sources.

From iron-air batteries to molten salt storage, a new wave of energy storage solutions is set to unlock resilience for tomorrow's grid.

These innovative CO2 batteries from Energy Dome promise long-duration energy storage for the grid, and reliable 24/7 clean power for data centers.

Welcome to the new energy storage field, where innovation meets sustainability. As renewable energy sources like wind and solar become mainstream, the need for efficient ...

Battery growth spurt Battery energy storage systems that suck up cheap power during periods of low demand, then discharge it at a profit during periods of high demand, are considered critical ...

Unlocking additional storage capacity will ultimately underpin a stronger and more efficient renewable energy sector. IDA incentives may also be used to support electric vehicle ...

Battery energy storage will be increasingly necessary to store power from renewable energy, like wind and solar, over the coming years to create a more reliable electric grid that delivers clean ...

As the global push toward renewable energy escalates, the need for effective energy storage systems becomes increasingly paramount. Renewables such as wind and ...

The New York State Energy Research and Development Authority (NYSERDA) today announced over \$5

million is now available to support innovative energy storage ...

A new technology known as Geochemical Energy Storage (GES) could provide months-long storage for renewable energy, increasing grid reliability.
