New Zealand relies on a combination of domestically produced and imported fuels to meet its energy needs. A common metric used internationally to measure this is a self-sufficiency ...

This research analyses how variabilities such as solar resource, electricity costs and storage options impact the value of solar for New Zealand ...

Supplying electricity to homes and businesses across New Zealand involves three key elements: generating electricity, transporting electricity to distribution companies, and then selling it to ...

Numerous companies generate power, but 92% of the generation sector is dominated by five companies: Contact Energy, Genesis Energy, Meridian Energy, Mercury Energy and Manawa ...

The work has discussed the hydrogen energy storage requirements for net zero in New Zealand, based on the variability of wind and solar electricity production and the round ...

New Zealand's total energy supply decreased in 2024, mainly due to ongoing field depletion and lower supply of gas. At the same time, growth in domestic renewable energy ...

Build new generation or storage assets, recognising that renewables could be an expensive option, but the investment case for new gas turbines is currently difficult.

This research analyses how variabilities such as solar resource, electricity costs and storage options impact the value of solar for New Zealand households.

In this update we explore the current state of New Zealand's renewable energy infrastructure and why it is
