-----

USTDA's technical assistance will advance Saint Lucia's efforts to build resilient microgrid infrastructure that can withstand severe weather events and provide continued ...

Currently, LUCELEC holds exclusive rights to generate electricity until 2045 under existing legislation. The proposed bill aims to decouple fossil fuel dependency by integrating ...

Modeling and simulation of grid-connected wind generation systems using permanent magnet synchronous generator (PMSG) are presented in this paper. A three-phase universal bridge, a ...

In this paper, a MATLAB/Simulink simulation program is used to construct a thorough simulation of a wind power generation system that includes the control strategy, ...

With abundant geothermal, wind, and solar resources to more than meet Saint Lucia's peak demand, even partial development of these resources could result in high penetration of ...

The Caribbean island prepares its grid for a more resilient future by starting with an effective operation and maintenance plan.

Additionally, and conditional upon the successful exploration of the resource, Saint Lucia intends to add geothermal energy generation to its renewable energy mix, which would ...

How much can new technologies such as solar photovoltaics or geothermal energy generation stabilize and reduce costs while advancing Saint Lucia's goals to reduce greenhouse gas ...

Does local use of wind and solar power affect the consumption of renewable power? However, the sub-effect
