How long do envirodata's weather stations keep their data?

Envirodata's weather stations retain their collected data internally, no matter how many times it is collected remotely. Typically, our stations will have over 12 months of 10 minute, hourly and daily weather data summaries stored, while some configurations will even allow for many years to be saved on the data logger.

How do I access my weather data?

View data, create reports and graphs on your customised desktop, via your secure login. Receive Alerts and Notifications via email, SMS or FTP. View or download your current or historical weather data at any time which can then be transferred to Excel or other third-party software packages.

Why should I add remote communications to my weather station?

However, adding remote communications to your weather station gives you immediate access to your weather data, no matter where you are! This eliminates the necessity to travel to the weather station site to manually download your data & allows you to plan visits to remote sites ahead knowing what the weather at site has been doing.

Why do we need satellites for weather forecasting?

Sensors Aloft: They carry packages measuring temperature, humidity, pressure, and wind as they rise. Why It Matters: Upper-level data is crucial for understanding how weather systems will develop and move. Satellites: Our eyes in the sky revolutionized weather forecasting.

An Automatic Weather Station can use mobile website traffic to send information. It does this by using cellular modems or parts that are built into the terminal's hardware.

Digital weather stations now deliver precise data on ...

This article explores the mechanics of wireless data transmission in weather stations, its components, technologies, benefits, ...
