How to find a suitable Bess power rating in Vietnam's power system?

In order to find the suitable BESS power rating and placement in Vietnam's power system for frequency stability improvement, the frequency response is firstly simulated under various values of BESS power ratings. After that, the simulation for the selected BESS' rating with various placements is conducted. 3.2.2.1.

Where can Bess be placed in a power system?

In terms of the location, BESS can be placed everywhere in the power system to perform the frequency support as long as land and connection plans are available. 4.2. Future Work BESS is the novel unit in Vietnam's power system which has been just proposed in PDP 8. Therefore, the following studies can be conducted for BESS in Vietnam:
