---

Discover the innovators driving 82% of global solar deployment with breakthrough technologies and record installations. In 2025, Asian ...

India, the US and West Asia are together expected to add 100 GW of solar capacity in 2025, while China will remain a dominant player ...

Discover the innovators driving 82% of global solar deployment with breakthrough technologies and record installations. In 2025, Asian manufacturers have solidified their position as global ...

In West Asia, the story is equally transformational. Governments are making generational investments--over \$100 billion to date--in gigawatt-scale renewables, with Saudi ...

We spotlight the top 7 solar energy projects in the Asia-Pacific region that are making significant strides in harnessing solar power.

China's 307 gigawatts of solar is already the biggest total installed capacity in the world. Impressively, China is set to double its record-setting rate of new solar development in ...

India, the US and West Asia are together expected to add 100 GW of solar capacity in 2025, while China will remain a dominant player in the sector, Wood Mackenzie ...

Discover West Asia's solar potential with Solcast" solar radiation map. Get real-time and forecast irradiance data based on three-dimensional cloud modelling. Powered by satellite data, our ...

Cheap solar can bring electricity to a major chunk of subcontinent's people who still live off-grid, bypassing the need of installation of expensive grid lines.

In an effort to show the strength of solar power in the region, we've compiled a list of the Top 50 largest Asian PV plants. This list of solar PV plants comes in preparation of the 2 ...

In the United Arab Emirates, rapid advancements in solar energy technology are driving significant investments and ambitious sustainability goals within the region's energy sector. ...

For solar power, South Asia has the ideal combination of both high solar insolation and a high density of potential customers. Cheap solar can bring electricity to a major chunk of subcontinent's people who still live off-grid, bypassing the need of installation of expensive grid lines. Also since the costs of energy consumed for temperature control squarely influences a regions energy intensity, and with cooling load
