-----  
Where is electricity produced in Montenegro?

The majority of electricity in Montenegro is primarily produced at the Pljevlja coal-fired Thermal Power Plant and the Perucica and Piva Hydropower Plants. The core activities of the majority state-owned Electrical Power Company of Montenegro (EPCG) are electricity generation, transmission, distribution, and supply.

Does Montenegro have hydro power plants?

Montenegro has the potential to develop additional hydro power plants given its abundance of rivers and streams, as mentioned in the Agreement of the Electro-Energetic Community for Southeastern Europe signed on January 1, 2015. The country's energy market was opened to competitors.

What type of power plug is used in Montenegro?

In Montenegro, the power plug sockets are of type F. Therefore, if you're coming from a country with different power plug types, you would need a power plug adapter.

Where are solar power plants located in Montenegro?

Montenegro is rich in solar radiation, particularly in the southern part, especially around the cities of Bar and Ulcinj, and in the area around the capital city of Podgorica. Solar power plants are located in these areas due to the high solar radiation.

The project involves installing two power transformers and linking them to the national transmission network via the new Lastva-Pljevlja transmission line.

This page has been created through the power networks country page template. Check the template page for more information on how to complete it.

It consists of wholesale and retail markets. Established the model of the wholesale electricity market including: long-term - market based on bilateral contracts, in the medium term - the day ...

Montenegro's energy landscape reflects a blend of historical reliance on hydropower, particularly through
