What type of glass is used to build a sunroom?

This will give you a better idea of what type of glass is being used to build your room. A truly insulated sunroom is built using double-pane glass- never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

Do sunrooms have tempered glass?

Few companies offer tempered glass as a standard feature for their sunrooms. Some may charge extra for this special glass. In reality, nobody should even consider a sunroom built with un-tempered glass. If you plan on using your sunroom year-round, make sure that you ask to see an insulated glass sample.

Does a sunroom have wall-to-wall glass?

This special sunroom has wall-to-wall glass as well as a glass roof. Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project. While sunroom location and type are very important, the safety of the glass is also a necessary consideration.

How do I choose the best glass for my sunroom?

Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project. While sunroom location and type are very important, the safety of the glass is also a necessary consideration. Make sure that you ask for tempered glass.

If your sunroom gets a lot of direct sunlight, tinted or reflective glass may be the best choice. Reduces glare while still allowing natural light to enter the room.

Sunrooms, four-season rooms, and greenhouses are walled with glass and roofed with glass or polycarbonate (a tough, transparent thermoplastic). A glass roof is considerably ...

Sunrooms feature tempered glass in the windows because it's safer and stronger than standard glass. Double pane glass with Low-E coating helps insulate a sunroom, especially if the space ...
