Battery energy storage systems (BESS) are vital for modern energy grids, supporting renewable energy integration, grid reliability, and peak load management. ...

As global installed site energy storage capacity surges past 200 GWh in 2023, a critical question emerges: Can our safety protocols evolve as fast as battery technologies?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical ...

The Department of Energy Office of Electricity Delivery and Energy Reliability Energy Storage Program would like to acknowledge the external advisory board that contributed to the topic ...

Facility owners seeking to reduce their operating costs, lower greenhouse gas emissions, and build resiliency at their facilities can benefit from installing on-site renewable energy generation ...

The energy storage industry is committed to working with state and local officials to review the existing fleet of battery energy storage facilities across California for potential safety risks and ...

In December 2020, DOE released the ESGC Roadmap, the Department's first comprehensive energy storage strategy to develop and domestically manufacture energy storage technologies ...

We consider emerging recommendations from the literature, markets, and leading experts on potential solutions for changing market structures and operations to unleash the ...
